

Autonomous Network Levels (ANL) evaluation methodology

(Course code - ODF-2506)

Conducting a detailed assessment of network autonomy requires a clear, explicit, and operable Autonomous Network Level methodology and approach, providing the basis for measuring the level of autonomy.

This course aims to help understand the systematic approach to evaluate the level of autonomy a network is currently running at, according to the Autonomous Network Levels Evaluation Methodology by TM Forum. It looks to provide insights into the approach of measuring the level of an Autonomous Network or Autonomous Network

what will you learn?

- Introduction to Autonomous Network Levels evaluation methodology.
- Basic principles and concepts of the methodology and the Key Effective Indicators.
- Insights to the challenges and mitigations of measuring the level of an autonomous network or autonomous network feature.

Format: Instructor Led

Level: Fundamental

Duration: 2+hrs

who should attend?

- Anyone involved in managing or developing Autonomous Networks, requiring an introduction to the ANL Evaluation Methodology.
- Business owners of telecom and vertical industries, senior managers, managers, business and system architects, consultants, engineers that need to understand the evaluation process measuring Autonomous Networks and Services and be able to have common language/conversations.

course certification:

A course attendance certificate is issued on satisfactory completion of the course. There is a knowledge certification exam also associated with the course material. Passing this exam counts towards the TM Forum Open API skill certification track. Find out more [here](#).
